

## **Technical Specialist, Dublin**

**Company detail:** Agricultural Magnetics Limited (AML) is a Irish headquartered technology based company that provides innovative and practical solutions for the agricultural and food sectors. The patented spraying technology known as MagGrow developed by AML allows end users to reduce their chemical and water usage during the pesticide spraying application and also increase yields in the process.

**Role Overview:** Technical specialist requires to manage testing, installation, product improvement and customer technical issues related to the MagGrow sprayers product range.

**Main Duties:**

- Management of customer installations
- Management and continual upgrading of product related documents (instruction manuals etc.)
- Provide customer with information related to the best practice with MagGrow products (application rates, pressures etc.)
- Technical input into design and continued product improvement/development.
- Deal with technical product and/or prototype issues, propose and test solutions.
- Assist the crop protection department with customers trials and documentation related to them (protocol, procedure, report ...)

**Additional Duties:**

- Assisting the operations department with product change requests and new product introduction.
- Assist the quality department on driving continuous improvement
- Role will support worldwide activities so travels will be required.

**Qualifications:**

- Qualification in Agricultural science or Agricultural technology
- A professional user of pesticides qualification would be advantageous.

**Experience:**

- 5+ years of relevant industry experience (sprayers technical work, crop protection)
- Technical experience with sprayers manufacturing company and/or dealerships
- Experience and/or expertise in experimental design and scientific reporting
- Experience of pest and disease control in field crop environment
- Experience in operating modern agricultural equipment would be advantageous.
